Because cultural change has the potential to occur faster than genetic adaptation, dynamics of niche construction that are driven by cultural traits play a prominent role in human evolution; yet, only in recent decades has cultural evolution begun to be explicitly incorporated into human evolutionary ecology . Studies that pioneered this approach showed how it can provide insight into the dynamics of the demographic transition in postindustrialized societies (e.g., refs.

Cultural evolution: These cognitive adaptations give rise to a robust second system of inheritance (cultural evolution) that operates by different transmission rules than genetic inheritance, and can thus produce phenomena not observed in other less cultural species. Theorizing about these processes requires taking what we know about human cultural learning and cognition, embedding them into ...
